

Abstract

There is provided a sub-display unit (display screen) for displaying characters, symbols, and images, a sub-transceiver for receiving data sent via wireless communication from another information processing device (portable telephone), and a sub-controller for controlling the sub-display unit so that the same content as all or part of content displayed at the display unit (display screen) of the other information processing device (portable telephone) is displayed based on the data received by the sub-transceiver.
